If I had the ability to convert more than five selected items at a time it would be even more helpful. Hopefully, the registered version will allow me to do so. ""I found a grade bust in 700' of road in the middle of the 7,000' feet I topo'ed so I found that the elevations were all 4.81' off... that meaning it was a rod height error. Thank you."Ghia T. 01/10/2014CHZ20"I really, really like this routine.I get .dwg's that have been exported out of a 3d software and they usually have tons of blocks with multiple sub entities and elevations all over the place.I also get constant updates for each site so it is nice to have each revision as a different color so I can decipher what changed from each revision.
